EDUCATION

Towson University — B.S. in Computer Science

05/2027 | Baltimore, MD

- **Honors:** Dean's List student recognized for academic excellence (Fall 2025)

Relevant Courseworks:

Data Structures & Algorithms, Object-Oriented Programming, Computer Architecture, Operating Systems, Software Engineering, Web programming

TECHNICAL SKILLS

Languages & Frontend — Java, JavaScript (ES6+), TypeScript, React, HTML5, CSS3, Tailwind

Backend & Databases — Spring Boot, Hibernate/JPA, Express, REST APIs, Sequelize, BullMQ, PostgreSQL, Redis, OpenAI API Integration, Multithreading

Testing Tools & Version Control — JUnit, Jest, Artillery, Git, GitHub, npm, REST API Testing, Integration Testing, Load Testing, CI/CD Fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer Intern — GoPanda

05/2026 – Present | Remote

- Maintained and enhanced a **production auction platform serving thousands of users**.
- Improved application efficiency by optimizing workloads across **processes and worker threads**, following performance and concurrency best practices.
- Implemented, tested, and deployed production updates and feature enhancements.

AI Data Trainer — Outlier.ai

06/2023 – 01/2024 | Remote

- Evaluated and improved 750+ AI-generated JavaScript outputs, identifying edge cases and improving model accuracy.
- Performed systematic debugging and data analysis to validate algorithmic correctness and ensure reliable outputs.
- Analyzed LLM reasoning steps and conducted structured prompt experiments to improve model performance and reproducibility.

PROJECTS

MockStack AI – AI-Powered Backend Interview Preparation Platform

05/2026 – 06/2026

- **Architected** and deployed a full-stack **AI-powered backend** interview platform using Spring Boot, React, PostgreSQL, Redis, and Stripe
- Designed an AI-driven interview **engine** that generates backend-focused questions and detailed explanations across SQL, REST APIs, concurrency, caching, networking, and system design
- Built a **production-ready** platform used by **early users** to practice backend interview concepts through AI-generated questions and personalized explanations

Fault-Tolerant Job Processing System – Java, Spring Boot, PostgreSQL

03/2026 – 03/2026

- Architected and built an asynchronous job processing system using **multithreading** to handle high-volume background workloads reliably
- Engineered **fault-tolerant retry** workflows with **exponential backoff**, **rate limiting**, and failure recovery mechanisms
- Engineered a **concurrent worker system** using thread pools to process jobs efficiently at scale

LEADERSHIP & VOLUNTEER

Full-Stack Team Project – Technical Lead

- Lead technical architecture and core development in a 4-person team project, building a scalable multi-tenant system.
- Coordinated development tasks and feature implementation across a 4-person team in a collaborative agile-style workflow
- Guided implementation of modular, maintainable, and **well-documented backend** components

Outlier AI – AI Quality Assurance & Cross-Functional Collaboration

- Actively engaged in a distributed team environment, coordinating via Slack to troubleshoot issues and streamline collaboration.
- Supported team efficiency by guiding peers through technical challenges and debugging tasks.
